(57)ABSTRACT

The programmable nursing bottle includes a first housing member configured to hold a liquid therein, a second housing member removably attached to the first housing member and a tube member extending from the first housing portion through the second housing portion. The second housing member includes a pump assembly, a programmable control assembly including an interface, a controller operatively connected to the pump assembly, and a sliding door member provided about the second housing member. The door is configured to slide from a first position in which the interface is exposed to a second position in which the interface is covered.
